

*The ChargeXpress PRO 60 assures battery power*  
**Battery Maintenance Equipment**  
*under all these circumstances*

## ChargeXpress PRO 60

*Professional Allround Service Bay Charger*

### **Applications:**

12 volts Lead Acid /Ca-Ca (Flooded), AGM, Spiral and GEL batteries for automotive, heavy-duty, agricultural and marine. 24 volts heavy-duty battery sets (2 x 12V) (optional)

Also available in 24V - 30A

### **Display:**

3 status LED's

### **Cable length:**

3 m

### **Power requirements:**

230 volts AC – 50 Hz / 16A

### **Charge curves:**

Lead-Acid/Ca-Ca (Flooded)

AGM(Spiral)

GEL

Program / In-Service mode

### **Charging Amps:**

60 A

### **Power output:**

720W

### **Warranty:**

Midtronics standard two (2) years

### **Can you correctly charge a 24 volt battery set?**

Charging a 24 volt battery set consisting of 2 (12 volt) batteries correctly should not be done by charging the batteries in series. Batteries are not always equal when looking at voltage and internal resistance. When charging in series this can lead to an uneven charging voltage across the batteries. Ultimately this results in an undercharged and overcharged battery. With the ChargeXpress PRO 60 the batteries can be charged at the same time (batteries should not be connected). Using the twin lead (optional) and connecting the individual batteries you are sure that both batteries will be fully charged.

### **Is your diagnostic bay prepared for modern vehicles?**

Modern vehicles have many electronic systems. We all know that these systems need to be checked with diagnostic equipment. This equipment will drain a very high amperage from the battery which might result in inaccurate diagnostics. For sure it will create problems for the battery and the car owner. Also the programming of a modern vehicle will heavily discharge the battery. Beside that it will endanger the programming sequence. The ChargeXpress PRO 60 assures battery power under all these circumstances. In the special 'service' or 'programming' mode the charger will guarantee power to the car.

### **Do your customers drive off with a discharged battery?**

With the ChargeXpress PRO 60 you can easily 'update' your service bays. Mounting the ChargeXpress PRO 60 on the wall or on the vehicle lift you can assure two vehicles (optional) of battery power. By connecting one lead to one car and the other lead to the other car. The charger will respond to that vehicle demanding the power.

*The ChargeXpress PRO 60 assures battery power under all these circumstances*
