1. Connect the tester clamps to the battery: red to the positive (+) terminal, black to the negative (–) terminal. For a good connection, rock each clamp back and forth.
2. The battery rating system last selected will appear on the display for 3 seconds. Press the TEST button to select the rating system. The display will show the letters of the rating system with dots (e.g., C.C.A).
3. Disconnect the clamps and connect the black clamp to the negative (–) terminal.
4. Press and hold the TEST button.
5. Connect the positive clamp (red) to the positive (+) terminal.
6. After the display shows the letters of the rating system with dots, release the TEST button.
7. Use the ARROW buttons to scroll to the correct rating system.

* For JIS, use the conversion table on the back of the PBT-300.

**Patents**

This tester is made in the U.S.A. by MIDTRONICS, INC. and is protected by one or more of the following U.S. Patents: 6,323,650; 6,316,914; 6,304,087; 6,249,124; 6,163,156; 6,091,245; 6,051,976; 5,831,435; 5,821,756; 5,757,192; 5,592,093; 5,585,728; 5,417,173; 5,672,248; 5,672,248; 5,481,038; 5,481,038; 5,481,038; Canadian patents: 1,280,164; 1,295,680; United Kingdom patents: 0,417,173; 0,672,248; German patents: 689 228 1,080; 639 258 388; 93 21 638.6; and other U.S. and Foreign patents issued and pending. This product may utilize technology exclusively licensed to Midtronics, Inc. by Johnson Controls, Inc. and/or Motorola, Inc.

**Service**

For service, contact Midtronics for a Return Authorization number, and return the unit to Midtronics freight prepaid, Attention: RA#. Midtronics will repair or replace the tester and reship, the next scheduled business day following receipt, using the same type carrier and service as received. If Midtronics determines that the failure was caused by misuse, alteration, accident, or abnormal condition of operation, the buyer must also pay for the repair charges in effect at that time.

**Limited Warranty**

This battery tester is warranted to be free of defects in materials and workmanship for a period of one year from the date of purchase. Midtronics will, at its option, repair the unit or replace the unit with a remanufactured tester. This limited warranty applies only to Midtronics battery testers and does not cover any other equipment, static damage, water damage, overvoltage, dropping unit or damage resulting from extraneous causes including owner misuse. Midtronics is not liable for any incidental or consequential damages for breach of this warranty. The warranty is void if owner attempts to disassemble the unit, or to modify the cable assembly.

**Caution:** Because of the possibility of personal injury, always use extreme caution when working with batteries. Follow all BCI safety guidelines when handling batteries. Wash hands after handling.

**Warning:** (Required by California Prop. 65) Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and birth defects or other reproductive harm. Wash hands after handling.

For testing 12-volt automotive starting batteries rated in CCA, SAE, DIN, IEC, and EN

INSTRUCTION MANUAL
1. If testing in-vehicle, make sure all vehicle loads (lights, etc.) are off and the key is removed. Connect the tester clamps to the battery: red to positive (+), black to negative (–). Rock each clamp back and forth to make a good connection.

2. The battery rating system last selected will appear on the display for 3 seconds, then the default rating value. (To change the rating system, follow the steps in "1. Selecting the Rating System.")

3. Use the ARROW buttons to scroll to the battery’s rating.

4. Press the TEST button.

5. One or more top-panel LEDs (green, green and yellow, yellow, or red) will light to indicate the battery’s condition. The display will alternate between the voltage and available power.

### 3. BATTERY TEST RESULTS

<table>
<thead>
<tr>
<th>Top-Panel LEDs</th>
<th>Decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>GREEN OK</td>
<td>The battery is good. Return it to service.</td>
</tr>
<tr>
<td>GREEN OK</td>
<td>Fully charge the battery and return it to service.</td>
</tr>
<tr>
<td>YELLOW LOW</td>
<td>Fully charge the battery and retest. If you get the same result after charging, replace the battery.</td>
</tr>
<tr>
<td>RED</td>
<td>The battery has failed or is weak and may soon fail. Replace the battery.</td>
</tr>
</tbody>
</table>

### 4. STARTING SYSTEM TEST

**NOTE: The battery must be good and fully charged for this test.**

1. Connect the tester clamps to the battery: red to the positive (+) terminal, black to the negative (–) terminal. Rock each clamp back and forth to make a good connection.

2. Press the V button to read the live voltage.

3. Start the vehicle.

4. Press and hold the DOWN ARROW to read the cranking voltage.

### 5. STARTING SYSTEM TEST RESULTS

<table>
<thead>
<tr>
<th>Bottom-Panel LEDs</th>
<th>Decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>GREEN OK</td>
<td>The cranking voltage is greater than 9.6 V. The starting system is OK.</td>
</tr>
<tr>
<td>RED</td>
<td>The cranking voltage is less than 9.6 V, which indicates a starting system problem. Check the connections, wiring, and starter.</td>
</tr>
</tbody>
</table>

### 6. CHARGING SYSTEM TEST

**NOTE: The battery must be good and fully charged for this test.**

1. When the vehicle is running, connect the tester clamps to the battery: red to the positive (+) terminal, black to the negative (–) terminal. Rock each clamp back and forth to make a good connection.

2. Press the V button to read the live voltage.

4. Press and hold the UP ARROW to read the highest average charging voltage.

### 7. CHARGING SYSTEM TEST RESULTS

**Bottom-Panel LEDs Decision**

<table>
<thead>
<tr>
<th>GREEN</th>
<th>The highest average charging voltage is between 13.3 V and 15.5 V. The charging system is OK.</th>
</tr>
</thead>
<tbody>
<tr>
<td>RED</td>
<td>The highest average charging voltage is less than 13.3 V or greater than 15.5 V, which indicates a charging system problem. If less than 13.3 V, check the connections, wiring, and alternator. If greater than 15.5 V, check the regulator.</td>
</tr>
</tbody>
</table>

**TROUBLESHOOTING**

If the display flashes or shows one flashing letter, the battery is too low (< 8 volts) to test. Fully charge the battery and retest.

A message that alternates between bAd and CELL means one or more battery cells are bad. Replace the battery.

A conn message means there is a bad connection. Disconnect the clamps and reconnect. Make sure to rock the clamps back and forth to make a good connection.

If the top-panel red LED lights **when you test in-vehicle**, there may be a poor connection between the battery cables and the vehicle. Disconnect the battery cables and retest at the battery posts before replacing the battery.

Excessive electromagnetic interference may cause the tester to reset during testing. Before retesting, reconnect the clamps and:

- Make sure all vehicle loads and the ignition are off.
- Move away from the noise source, which may be a charger or other high-current device.
- If you are unable to find the noise source, fully charge the battery and retest at the battery posts. If the top-panel red LED lights again, replace the battery.
